

SPRINT 3

Date	12 November 2022
Team ID	PNT2022TMID01830
Project Name	Smart Farmer – IOT Enabled Smart Farming Application
Maximum Marks	8 Marks

Simulation:

Sending temperature and humidity values from IBM Watson to Node-Red.

Temperature and Humidity Values in IBM Watson:

The screenshot shows the IBM Watson IoT Dashboard interface. The top navigation bar includes 'Browse', 'Action', 'Device Types', and 'Interfaces'. A table lists devices, with device 12345 highlighted. Below the table, the 'Recent Events' tab is selected, showing a stream of data events. The events table has columns for Event, Value, Format, and Last Received. All events are from an 'IoT Sensor' and contain the same JSON payload: {"d":{"temp":51.4,"humidity":86}}.

Event	Value	Format	Last Received
IoT Sensor	{"d":{"temp":51.4,"humidity":86}}	json	a few seconds ago
IoT Sensor	{"d":{"temp":51.4,"humidity":86}}	json	a few seconds ago
IoT Sensor	{"d":{"temp":51.4,"humidity":86}}	json	a few seconds ago
IoT Sensor	{"d":{"temp":51.4,"humidity":86}}	json	a few seconds ago
IoT Sensor	{"d":{"temp":51.4,"humidity":86}}	json	a few seconds ago

Temperature and Humidity Values in Node-Red:
